

Listing of the Claims:

Claims 1-20 (cancelled).

21. (Currently Amended) A method comprising:
establishing a first connection between a first portable device and a computing device;
~~transmitting-receiving~~ a first set of personalized information of a first memory of the first portable device ~~from the first portable device to the computing device~~;
receiving a user selection of a second set of personalized information to be transmitted to a second portable device, wherein the second set of personalized information is selected from the first set of personalized information;
establishing a second connection between the computing device and the second portable device;
receiving data field information from the second portable device, wherein the data field information includes size information of one or more data fields included in a data record of at least one of: a calendar, a phonebook, a message box and a call register of the second portable device;
modifying the second set of personalized information in accordance with the data field information; and
transmitting the modified second set of personalized information to the second portable device.

22. (Cancelled).

23. (Previously Presented) The method according to claim 21, wherein each of the first connection and the second connection comprises a wire-based data connection.

24. (Previously Presented) The method according to claim 21, further comprising:
evaluating the second portable device's capabilities to receive the selected second set of personalized information.

25. (Previously Presented) The method according to claim 21, wherein the first set of personalized information is user selected.

26. (Previously Presented) The method according to claim 21, wherein each of the connections between the first and second portable devices and the computing device comprises a secure WAP session.

27. (Cancelled).

28. (Cancelled).

29. (Currently Amended) A computer readable medium storing computer readable instructions that, when executed by a processor, cause a data transfer application on a computing device to perform a method comprising:

establishing a first connection with a first portable device, the first portable device having a first memory storing a plurality of personalized information;

~~transmitting-receiving~~ a first set of personalized information of the plurality of personalized information of the first portable device from said first memory of the first portable device to the computing device using the data transfer application;

receiving a user selection of a second set of personalized information to transmit to a second portable device, wherein the second set of personalized information is selected from the first set personalized information;

establishing a second connection with the second portable device;

~~receiving, from the second portable device,~~ data field information from the second portable device corresponding to one or more data fields included in a data record of at least one of: a calendar, a phonebook, a message box and a call register of the second portable device;

modifying the second set of personalized information in accordance with the data field information; and

transmitting the modified second set of personalized information to the second portable device.

30. (Previously Presented) The computer readable medium of claim 29, the method further comprising:

evaluating the second portable device's capabilities.

31. (Previously Presented) The computer readable medium of claim 29, wherein the first set of personalized information is user selected.

32. (Previously Presented) The computer readable medium of claim 29, wherein each of the first connection and the second connection comprises a WAP session.

33. (Cancelled).

34. (Cancelled).

35. (Currently Amended) A system comprising:

a computing device, wherein the computing device receives from a first portable device a user selected first set of personalized information; and

a data transfer application stored on the computing device, wherein the data transfer application modifies, in accordance with data field size information received from a second portable device, a second set of personalized information selected from the first set of personalized information, wherein the second set is selected by a user for transmission to the second portable device and wherein the data field size information corresponds to a one or more data fields included in a data record of at least one of: a calendar, a phonebook, a message box and a call register of the second portable device of the second portable device.

36. (Previously Presented) The system of claim 35, wherein the data transfer application evaluates the second portable device's capabilities to receive the user selected second set of personalized information.

37. (Previously Presented) The system of claim 35, wherein each of the first and second data connections comprises a secure WAP session.

38-40. (Cancelled).

41. (Currently Amended) A method comprising:
receiving, at a computing device, a set of personalized information from a first portable device, wherein the personalized information includes a first data record;
establishing a connection between the computing device and a second portable device;
transmitting, to the second portable device, a request to write the first data record to the second portable device;
receiving, from the second portable device in response to the request, a confirmation including data storage specifications;
modifying the first data record in accordance with the data storage specifications field size information of one or more data fields included in a second data record of the second portable device, wherein the second data record corresponds to at least one of: a calendar, a phonebook, a message box and a call register; and
transmitting the modified first data record to the second portable device.

42. (Previously Presented) The method of claim 41, wherein the confirmation further includes an acknowledgment that the first data record includes new data.

43. (Currently Amended) The method of claim 41, wherein the data storage specifications include at least one of a data field size and the first data record is further modified in accordance with a data type of the one or more data fields included in the second data record.

44. (Currently Amended) The method of claim 41, wherein modifying the first data record in accordance with the storage specifications data field size information includes truncating at least a portion of the data first record.—

45. (Currently Amended) The method of claim 41, further comprising:
transmitting, to the second portable device, a second request to write a ~~second~~third data record to the second portable device; and
receiving, in response to the second request, a rejection identifying the ~~second~~third data record as information already stored on the second portable device.

46. (Currently Amended) A computer readable medium storing computer readable instructions that, when executed, perform a method comprising:
receiving, at a computing device, a set of personalized information from a first portable device, wherein the personalized information includes a first data record;
establishing a connection between the computing device and a second portable device;
transmitting, to the second portable device, a request to write the first data record to the second portable device;
receiving, in response to the request, a confirmation including data field size information of one or more data fields included in a second data record of the second portable device, wherein the second data record corresponds to a phonebook stored in the second portable device;
modifying the first data record in accordance with the data field size information; and
transmitting the modified first data record to the second portable device.

47. (Previously Presented) The computer readable medium of claim 46, wherein the confirmation further includes an acknowledgment that the first data record includes new data.

48. (Currently Amended) The computer readable medium of claim 46, wherein modifying the first data record in accordance with the data field size information includes truncating at least a portion of the first data record.-

49. (Currently Amended) The computer readable medium of claim 46, wherein the set of personalized information corresponds to a first data size different from the data field size information of the second portable device.-

50. (Currently Amended) The computer readable medium of claim 46, further comprising:

transmitting, to the second portable device, a second request to write a ~~second~~third data record to the second portable device; and

receiving, in response to the second request, a rejection identifying the ~~second~~third data record as information already stored on the second portable device.
